└── /examples
```

---

## 🛠️ Step-by-Step Instructions

### Step 1: Organize Local Folder
- Keep all files inside `Project 1-Cognitive Architecture Toolkit`.
- Scripts go in `/scripts`.
- Landing page HTML in `/landing`.
- Emails, videos, marketing assets in their respective folders.

---

### Step 2: Create GitHub Repo
1. Go to GitHub → **New Repository** → name it `cognitive-architecture-toolkit`.
2. Upload all files from your local folder.
3. Commit and push.

---

### Step 3: Add Workflows
- Place `.github/workflows/ci.yml` (safety checks).
- Place `.github/workflows/deploy.yml` (landing page deployment).
- Push changes → GitHub Actions will run automatically.

---

### Step 4: Enable GitHub Pages
- Repo Settings → Pages → Source: “GitHub Actions.”
- Landing page goes live at:
  `https://<username>.github.io/cognitive-architecture-toolkit/`

---

### Step 5: Payment Storefront
- Create Gumroad/Payhip account.
- Add product metadata (title, description, price).
- Upload `playbook.pdf`.
- Add refund policy and payout info.
- Publish product.

---

### Step 6: Marketing & Community
- Use `/emails` for MailerLite/ConvertKit.
- Use `/videos` scripts to record or auto-generate clips.
- Use `/marketing` assets for Product Hunt, LinkedIn, Twitter.
- Create Discord server → seed with onboarding resources.

---

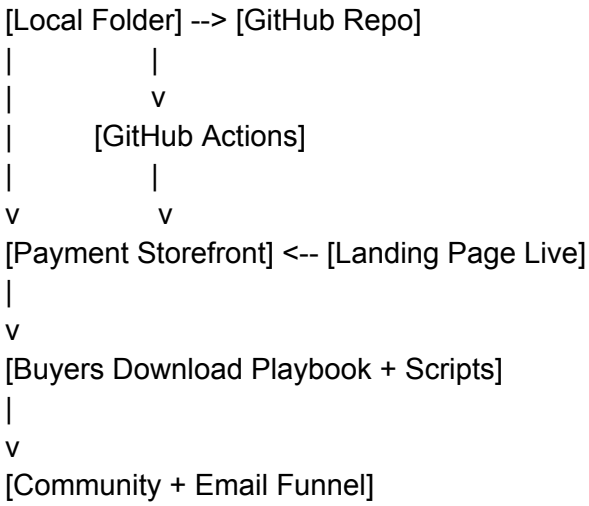

### Step 7: Verification
- Check GitHub Actions logs → ensure preflight and compatibility checks pass.
- Visit landing page → confirm it loads.
- Download release asset → confirm it opens.
- Send test email → confirm delivery.

---

### Step 8: Launch
- Announce on LinkedIn, Twitter, Product Hunt.
- Share free script `run-this-first.ps1` as lead magnet.
- Invite early adopters to Discord.
- Collect testimonials and update `/marketing/testimonials.md`.

---

## 📊 Flow Diagram

---

## 🎯 Products Ready

1. **Starter Pack ($49 one-time)**
   - Playbook PDF, scripts, templates, onboarding emails.
   - Delivered via Gumroad/Payhip.

2. **Pro Bundle ($100/month)**
   - Starter Pack + community access, monthly updates, office hours.
   - Delivered via Gumroad/Payhip subscription.

---

## 📄 Provider Prompt (for VS Code / Cline)

Paste this into VS Code (Cline extension):

You are my automation assistant. I have a folder named "Project 1-Cognitive Architecture Toolkit" with:

strategic-architect.md

surgical-builder.md

product-metadata.json

README.md

AgentChangeLog.jsonl

MEMORY_BANK.md

/scripts folder with PowerShell files

/landing/index.html

/emails, /videos, /marketing, /examples

Tasks:

Initialize a new GitHub repo named cognitive-architecture-toolkit.

Add .github/workflows/ci.yml and .github/workflows/deploy.yml.

Push all files to GitHub.

Enable GitHub Pages via Actions.

Verify landing page is live.

Prepare Gumroad/Payhip product draft using product-metadata.json.

Confirm playbook.pdf is uploaded as product file.

Generate release asset from repo.

Provide me with final links: GitHub repo, landing page, Gumroad product draft.

Request tokens or credentials when needed (GitHub PAT, Gumroad API key). Store them securely. Pause for human confirmation before publishing payment product.

---

## ✅ What You Achieve
- A live GitHub repo with automated checks.
- A landing page deployed via GitHub Pages.
- A payment storefront ready to accept money.
- Marketing assets and community setup.
- Two products (Starter Pack + Pro Bundle) ready to earn revenue.
